

# SYGATE Protection Agent NASA IV&V Installation guide

After you have downloaded and unzipped the Sygate package to your computer locate the directory you have saved it in and run **setup.exe** by double clicking it. The installation prompts are fairly straightforward and should require no additional input.

Click the **Accept License Agreement** when prompted and continue. When presented with the choice of installation destination directories allow the default destination and click next.

Click **Finish** when prompted to complete the installation. You will then be asked to restart your computer for the changes to take effect. Select **YES** to restart immediately or **NO** if you would like to restart at your convenience. You **MUST** restart before the Sygate agent service can run.
